

CastBoard

Live Digital Signage for Fire TV — Powered by ITSolutions SWFL

CastBoard turns any Fire TV into an always-current display board for your menu, specials, schedule, or presentation — kept live and in sync with a file you already edit. Change the file, and the screen updates itself.

The screen your customers see — clean, simple, always current.

KEY FEATURES

Always Current, Zero Effort

Update your menu or presentation from anywhere, on any device — the display board picks up the change automatically, on a schedule you control.

Any Content You Already Have

PowerPoint presentations, PDFs, photo slideshows, or video — whatever format your content is already in works, with no conversion required.

Offline Backup — Never Go Dark

If the internet ever goes down, staff can cast content straight from any computer on the same WiFi — no app to install, no internet required for that step.

Fits Your Space

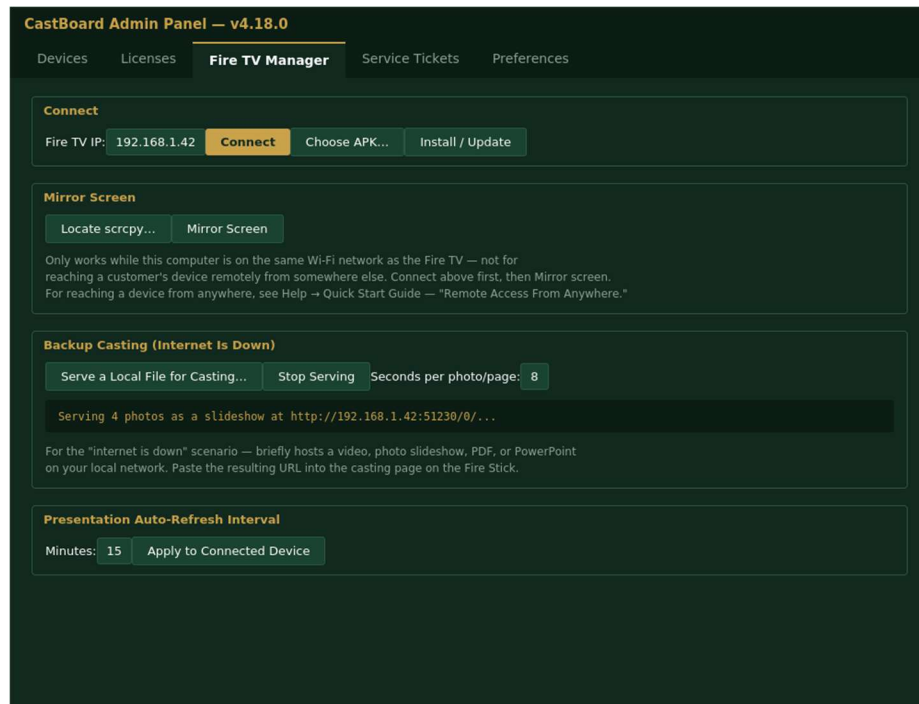

Supports both standard landscape screens and displays mounted sideways for vertical menu boards.

Speaks Your Customers' Language

Built-in support for English, Spanish, French, Italian, and Portuguese, right on the device.

PROFESSIONALLY MANAGED

Every screen is centrally managed and supported by ITSolutions SWFL — installs, updates, and troubleshooting handled through dedicated management software, so you never have to touch the technical side.

Behind the scenes: the management tools that keep every screen running smoothly.
